Used Parts for Forklifts

Used Parts for Forklifts - Sooner or later, forklift parts will wear and must be replaced. Obtaining brand new components could become a pricey venture so another idea is to acquire used lift truck parts. This can save a lot of cash in the long run. It is a good idea to buy used forklift components which have been remanufactured. These components would ensure that you are getting components that will work for a long time and be productive.

Worn or broken parts that are remanufactured are a cheaper solution than rebuilding. With rebuilding components, just the components which are worn out or broken get changed, which means that other wearable parts can break down soon after acquisition.

Remanufacturing however offers the best assurance for second-hand components. Reproduced parts are taken apart and cleaned and then all wearable pieces are changed. All wearable components are replaced regardless of age or wear which is one more reason why remanufactured components overall perform so much better. Any component within the part is new and this offers far longer life to the used part. Based on the forklift components that are being redone, the cleaning process and the entire remanufacturing process would vary.

After complete disassembly, the engines are oven cleaned. Various parts of the engine like spark plugs, pistons, rings, valve springs, filters, and valves could be replaced during the remanufacture process. The engines are hot tested after reassembly to ensure that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are one more thing which is oven cleaned after being disassembled. The transmission is then washed. A comprehensive examination is done to be able to check for any cracks. Bushings, seals and bearings are all replaced. Usually, the replacement components utilized on transmission parts meet OEM specifications.

A few forklift parts like for example torque converters, the alternator, the water pump, the starter and steer axles could be quite serviceable after worn parts are replaced. The electronic control in the electric lift truck is maintained by the control card. This card could also be remanufactured with replacing all aged and worn out parts. Unlike different lift truck components the control card can only have the worn and aged components replaced.

Components that are remanufactured have to be meticulously checked upon reassembly to ensure they are in good condition prior to being sold. When buying these parts, it is a good idea to make certain that they have undergone all of the proper testing and inspections. On certain bigger parts like for example transmissions, steer axles and engines, OEM specification replacement components should be utilized.

The dealer of used lift trucks and components could guarantee that the remanufactured components have met OEM specifications and that these parts meet industry standards. Lots of details go into remanufacturing used components. This attention to detail offers more serviceability out of remanufactured parts compared to the parts that were simply rebuilt.
