

## Remanufactured Forklift Parts

Remanufactured Forklift Parts - Lift trucks are somewhat costly pieces of equipment because a brand new electric forklift unit can cost anywhere from \$18,000 to \$25,000, for a five thousand pound equipment. What's more, several thousands of dollars would have to be invested in a battery battery and charger. A similar internal combustion forklift of the same lift capacity would cost slightly less and the diesel models that are capable of heavier lifting capacities could cost upwards of \$100,000. Reconditioned forklifts are a choice so as to save a large amount of cash in view of the fact that they cost less than half the price of new units.

Various individuals think they would face more maintenance issues if they buy a reconditioned lift truck and are apprehensive of acquiring a used forklift at a sale price. A properly reconditioned lift truck will work just along with a new one and whichever fears of repairs are unfounded. Although your lift would get heavy use, so long as you take proper care of the machinery, it would serve all your needs and possibly save you a lot of money.

It is important to establish what the seller means by a reconditioned or refurbished lift truck when considering purchasing a second-hand lift truck. A lot of companies do a very good job reconditioning a unit prior to selling it. This consists of disassembling the lift truck, rebuilding the engine, sandblasting the lift and then reassembling the whole thing and finishing with a fresh coat of paint.

To meticulously reconstruct a lift truck engine, a good company would first absolutely disassemble it. A heat cleaning system is then used to clean all of the parts. Once this step has been completed, all of the components are checked to see if they have any defects, any breakage or any extensive wear. Some parts like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are resized, reground and resurfaced if necessary. Various parts such as nuts, bolts, gears and so forth. are repaired or replaced as considered necessary.

The engine is rebuilt manually when the overhaul has been accomplished. After putting it back together, a series of tests are applied to the working machine. This is done to check all of the components to ensure there are no problems or leaks. If any problems occur, the needed changes are done.

There is no reason to be apprehensive about buying reconditioned lift trucks from quality sellers. The process the machines go through to be rebuilt ensures the utmost dependability. Maintenance costs could truly work out to be less in view of the fact that you would avoid the initial phase of higher upkeep projections that a new lift truck has as it is broken in. By following routine upkeep schedules and taking care of the machine appropriately, a reconditioned forklift will serve you well.
